

Mr. VIDIT SHAH

AI Engineer | Machine Learning

✉ viditshah5656@gmail.com ☎ +91 7778977229 📍 Gujarat, India 🌐 LinkedIn 📁 Portfolio

SUMMARY

AI/ML Engineer specializing in Large Language Models (LLMs), Machine Learning, Computer Vision, and Agentic AI Systems. Experienced in developing production-grade AI applications using Python, TensorFlow, PyTorch, FastAPI, React, and Electron. Built MeeraAI and AarnaAI, delivering scalable AI solutions focused on local inference, RAG, and predictive analytics.

EDUCATION

B.E. Robotics & Automation, *Government Engineering College* 2026 | Gandhinagar, Gujarat
GTU CGPA: 8.45/10

KEY SKILLS

- Python, C, C++, SQL
- TensorFlow, Keras, Scikit-learn, OpenCV
- Pandas, NumPy, Hugging Face Transformers
- Machine Learning, Deep Learning, Computer Vision
- Large Language Models (LLMs), RAG, Agentic AI Systems
- LoRA/QLoRA Fine-Tuning, Prompt Engineering
- llama.cpp, GGUF, MCP

CERTIFICATIONS

CS50: Introduction to Computer Science Harvard University 🔗	Machine Learning with Python freeCodeCamp 🔗	Elements of AI (2 ECTS Credits) University of Helsinki & MinnaLearn 🔗
---	---	---

PROJECTS

MeeraAI – Local AI Assistant for Desktop 04/2025 – Present

Python • FastAPI • Electron • React • TypeScript • SQLite • llama.cpp • GGUF

- Engineered a local-first AI desktop platform integrating GGUF-based LLM inference with seamless cloud fallback through a unified API.
- Developed Retrieval-Augmented Generation (RAG) with page-level retrieval, grounded context injection, and source attribution to improve response accuracy.
- Implemented Model Context Protocol (MCP) tool execution supporting stdio and SSE for extensible agentic workflows.
- Built intelligent GGUF runtime management with automatic model discovery, hardware-aware recommendations, and quantization-aware optimization.

AarnaAI – AI-Powered Stock Market Prediction & Analytics Platform 10/2024 – Present

Python • TensorFlow • Keras • Scikit-learn • Streamlit • Plotly

- Developed an AI-powered stock market prediction platform utilizing LSTM neural networks for time-series forecasting and Random Forest models for market trend classification.
- Built an end-to-end machine learning pipeline for historical data preprocessing, feature engineering, model training, evaluation, and future price prediction.
- Integrated technical indicators including RSI, MACD, Bollinger Bands, SMA, EMA, ATR, OBV, and Stochastic Oscillator to improve predictive performance.

AI-Based Industrial Safety Monitoring System 05/2025 – 07/2025

Python • OpenCV • Intel OpenVINO • Computer Vision

- Developed an AI-powered industrial safety monitoring prototype during the Intel AI for Future Workforce Program based on an industry-sponsored problem statement.
- Built a computer vision solution capable of detecting workers and machinery in real time using Python and OpenCV.
- Optimized inference using Intel OpenVINO for improved deployment efficiency and real-time performance.
- Designed the system to analyze both live video streams and recorded footage for industrial safety applications.
